## Abstract

As the world becomes increasingly connected, it is of import to analyze outcomes of immigrants. This paper seeks to understand the role of potential informal networks on the labor and wealth outcomes of immigrants moving to what I term as "hotspot cities", cities in which their ethnic group makes up a significant proportion of the population. Utilizing a dynamic equilibrium approach and leveraging extensive microdata, gaining an understanding of the effect of the group on outcomes is plausible. Tracking households with datasets like IPUMS and ACS, as well as leveraging general trends with PSID, this research will parse out the effect of moving to a hotspot city versus moving elsewhere.

**Keywords:** Wealth outcomes, immigration, informal networks

## 2.1 Previous Approaches

## 2.2 Limitations of Existing Work

# 3 Methodology

## 3.1 Problem Formulation

## 3.2 Proposed Approach

# 4 Experimental Evaluation

## 4.1 Experimental Setup

Describe your experimental methodology, including:

- Datasets used
- Evaluation metrics
- Baseline methods
- Implementation details
- Hardware/software specifications

## 4.2 Datasets

Provide details about the datasets used in your evaluation.

Table 1: Dataset Statistics

Dataset	Training Samples	Test Samples	Features
Dataset 1	10,000	2,500	784
Dataset 2	50,000	10,000	3,072
Dataset 3	1,000,000	100,000	128
